Card Type _____

Signed _____

All money received will go to the Shauni Bow Foundation

On November 14th this year Shauni was to have been travelling to the USA and Germany with her U18 SASI Basketball Team for 25 days. She was also due to sit her year 12 exams. However, in mid October she was diagnosed with Non-Metastatic (i.e. localised) Ewings Sarcoma. This type of cancer is the second most common childhood bone cancer. A large tumour has grown into the soft tissue area of her abdomen, originating from the Pelvic bone. Her treatment involves chemotherapy, radiotherapy and possibly surgery. She has started intensive chemotherapy that will continue for the next 3 months and will see her in hospital every fortnight on rotating 2 and 6 day stays. At the conclusion of chemotherapy, Shauni will undergo a range of tests and scans to determine the effect of chemotherapy on the tumour. The aim of chemotherapy is to shrink the tumour and kill any cancer cells that may have spread to the rest of the body.
